OCTOBER 04, 2012

This week's projects will help you make cool stuff: animate a miniature movie masterpiece, engineer a toy from scratch, or turn a memory into a piece of free art.

The Free Art Machine
by Chicago The Beautiful
Public Art
Chicago, IL

Free for all

The Free Art Machine transforms crowd-sourced imagery into handmade photo block prints, then finds creative ways to distribute them to the public for free. The Chicago-based project currently displays the work as "free art walls" in local coffee shops and galleries, but anybody is welcome to take part by submitting a piece of original artwork.

Antique animation

FlipBookKit can be many

FlipBooKit - Mechanical Flipbook Art and Kit

by shinymind

.Mixed Media

.Los Angeles, CA

things: a hand-cranked flipbook of custom images, a mechanical movie maker, or a personal penny arcade machine. Originally crafted in limited numbers for a gallery show, enthusiastic public response inspired its makers to fashion special kits that could be built at home. Each comes with 30 flipbook panels, a manual hand crank, and printing instructions for creating your very own animated masterpiece.

GoldieBlox: The Engineering Toy for Girls

by Debbie Sterling

.Design

.San Francisco, CA

Breaking the mold

GoldieBlox is the toy that engineer Debbie Sterling wishes she had as a kid. A combination construction set and book series, it allows young girls to both read and build along with its protagonist, an inspiring pint-sized inventor named Goldie. For example, when Goldie makes a belt drive for spinning all her friends, readers are instructed on how to craft their own

miniature version out of
ribbon spools and
paper cut-outs. Sounds
just right!
