Subject: My calendar in new phone

Hi james. My calendar in this new phone gives me grief! It tells me "I cannot store this event where I want to store it" or something like that when I am trying to input reminders and appts in the calendar from my phone. When I am on the computer it is fine and events are stored and I can see on phone. But when trying from my phone it doesn't work more than half the time. Sometimes my phone locks when I hit save and then everything disappears and my screen jumps to my home page with icons? Do you know why this might be happening!? It's driving Me nuts. My calendar is very important. LMK! [REDACTED]
