Subject: Re: Any Update for Jeffrey Epstein

Jeffrey replied back! He says: diabetes and kidney issues!
Thanks so much!

Please stress that providing the info is completely voluntary.
Theoretically it should make for a more personalized analysis and it gives him the opportunity to let me know if there is any medical condition he specifically wants me to do a deep dive with his data on. (The general screen for medically serious mutations will happen of course even without any additional info from him.)

Hi Joe! thank you so very much for the update...I am not sure if Jeffrey would like to provide any family medical history but will ask and get back to you...great to know things are moving along!!

Hi [REDACTED], sorry for not replying earlier. I'm analyzing data now on the exomes we've sequenced. Jeffrey's raw data should be available soon 2-3 weeks and I expect everything to be wrapped up the end of this month.

Do you know if Jeffrey wants to voluntarily provide any personal medical or family medical history? We can personalize the analysis based on this info. For example, for people with a strong family history of breast cancer, I can make sure we do a thorough look at breast cancer associated genes in addition to the basic analysis for these individuals. Specifically, family medical history on sibs, parents, and grandparents can be useful - as well as any history of inherited disorders - especially if it is rare and early onset in life.

Thanks in advance for passing on this info.

Best,
Joe
