thanks Bob...the doors looked bad before Norman went after it...I am confused as to why Norman would think using the power washer would be ok? To tell you the truth though, Norman also put the muratic acid on our bluestone counter top and it is now a yellow/green in areas instead of blue! He knows the counter tops need to be sealed and has that on his To Do list, but I am concerned we now have yellowish greenish bluestone instead of bluestone...

I didn't clean it with anything. From the looks of it, it will need another coat. Remember you coated it. Talk to the painter and get back to me.

Bob, That seems to be some type of residue on the doors. I showed it to the house sitter and she said same thing. I told them if they want another coat of poly I'll talk to the painter.
They used a harsh chemical to clean the doors that took the luster out of the stain.
