I want to set up an experiment. I want to bring 6 bags of organic soil and seed. Do some patches to see which will work best

1. two bags of soil mixed with existing soil then seed. Put the organic stuff down and mix it with the stuff I put down.
2. two bags of soil just put over the top of existing soil. Then seed, rake it in.
3. Same soil and use a different seed. Just to make sure the seed was good.

I want to do that today. I am also going to go over to this guy's business today. I will get his name and send the letter this week. Buy the time the fall gets here we will know which method works and which one doesn't.

Tom Costello will meet all of us at 12:30 tomorrow at the house. I changed the time Bob, so you could be around as well.
