<=r>

My advise from the w=rd get go was keep the changes to a minimum.

=/span>

Now would you like t= share the desired Floor Plan and I will ask Jet Aviation to look at it.

I am in receipt of your e-mail and attachments.

In reviewing the current and the desired floorplans I realized the layout f=r the latter hardly retains any seats, divans, furnishings, bulkheads, sid=-ledges or monuments in their current cabin location.

This kind of radical floorplan change would require quite large non-reoccur=ing engineering (NRE) and certification (STC) effort.

The upper and lower supporting structure, potable, gray and waste water plu=bing, electrical (IFE/CMS/Cabin Lighting, etc), periphery (i.e. headliners= valances and domes) system, in the current cabin layout would have to be =emoded as to allow the new cabin layout.

Not being the completion center holding the original interior STC approved =ngineering data package we would have to create the engineering data requi=ed to support the certification process (STC) for the new configuration. The FAA certification level is greater today than it was in 1999, when the =riginal interior was initially certified (STC) In order to

salvage and reuse the existing seats, divans, furnishings, bulkheads, side-ledges or monuments the engineering for the installation of the cabin elements would have to be validated.

There is the risk that many of the cabin elements certified in the 1999 STC could not be certified in today's regulatory environment.

In essence the NRE, labor and material costs and the down-time time involve for the desired floorplan would be even greater than starting with a green aircraft without an interior already in place (8-12 months down-time and \$25.0 M. to \$30.0 M price range) as we would have to spend quite a bit of effort in analyzing and validating the original interior.

On the other hand, if acceptable to your Principal, we were able to work around the existing interior distribution layout and limit the refurbishment efforts to incorporating new materials and design features we would be in the 4-8 months down-time and \$5.0 M to \$7.0 M budgetary price range.

Thanks and Best Regards!

I have put my entire 58 aircraft experience on the table for free, I am not sure which part of what I have advised you was flawed that you didn't want to listen to?

There is no one who can direct you better than I can, I have delivered the most aircraft and you are getting opinions expressed to you that are not supported by the required information.

The safest way to do what you want to do is in Basel as they have all the Original drawings. There is one place that could manage this in the US.

I am still willing to assist you if you have the desire to.
