I uploaded the files to the Epstein shared but for some reason 46 files were not copied over. In the [REDACTED] iCloud folder you'll find a word document named "Unable to copy" which lists all of the files that were not copied. Opening the files doesn't work either. For example, when I tried to open one of the .jpg that were not copied a message popped up saying "the file appears to be damaged, corrupted or is too large." It's definitely something for IT to take a look at.
