Good Morning,

I apologize for the delay in response, but I had signed a non-disclosure agreement with the FBI and had to get them to clear me to respond. When I went to Quantico we found that the system had lost two drives. One drive had failed a couple weeks before the second drive (I don't remember the exact date). The second drive failed on August 8th, which caused the raid array to fail. The recorders are designed to allow one drive to fail, after two drives fail you lose recording. Both Jeff McKenzie and Jeff Cranor worked on this case with the Comm Tech onsite. I have listed the FBI contact information along with both Jeff McKenzie and Jeff Cranor.

FBI Agent I worked with was [REDACTED], I don't have his number.
Jeff McKenzie cell number is: 571-294-1016
Jeff Cranor cell number is: 913-300-1752

Good Morning Jeff,

Thank you for taking the time to talk to me this morning. During our conversation, you stated that you were brought out to Quantico by the FBI to analyze the drives taken from the MCC in August 2019. We would appreciate it if you can provide us with a written summary/report of your findings after your examination of the drives (i.e., when the drives failed, how it failed, what actions were taken to fix the drives, if any data was recovered, etc.) Also, please provide me with a copy of any email communications you or your office had with the FBI regarding this matter.

Please forward me the contact information for Jeff McKenzie and any internal logs detailing McKenzie's communication with any MCC employees between August 1, 2019 and August 20, 2019.

I appreciate your help with this matter. Thank you.
