

- Tool that use to do imaging incorporate the hashing into it; when finished with imaging, know that the data on the image is identical to the data on the original device
  - GX 405 and 419 were generated by Access Data AD Lab
  - Access Data AD Lab: computer forensic program which categorizes and organizes data off of computers, digital media, for review; same tool as Forensic Tool Kit (FTK), but that is limited to one user at a time, whereas AD Lab allows for multiple users at a time
  - Group in headquarters test and validate tools before CART uses the tools
  - GX 418, 420, 421, 422 were created under user profile named gmax
  - Computer: any device which has 4 separate characteristics: takes input, produces output, has a processor, and has storage
  - CART uses various software products to conduct a forensic examination; product used depends on what is being examined
- [REDACTED]
