I'm sending this early as I'll be at JEH for a 1pm meeting re: the Pittsburgh case.

New York (Epstein):

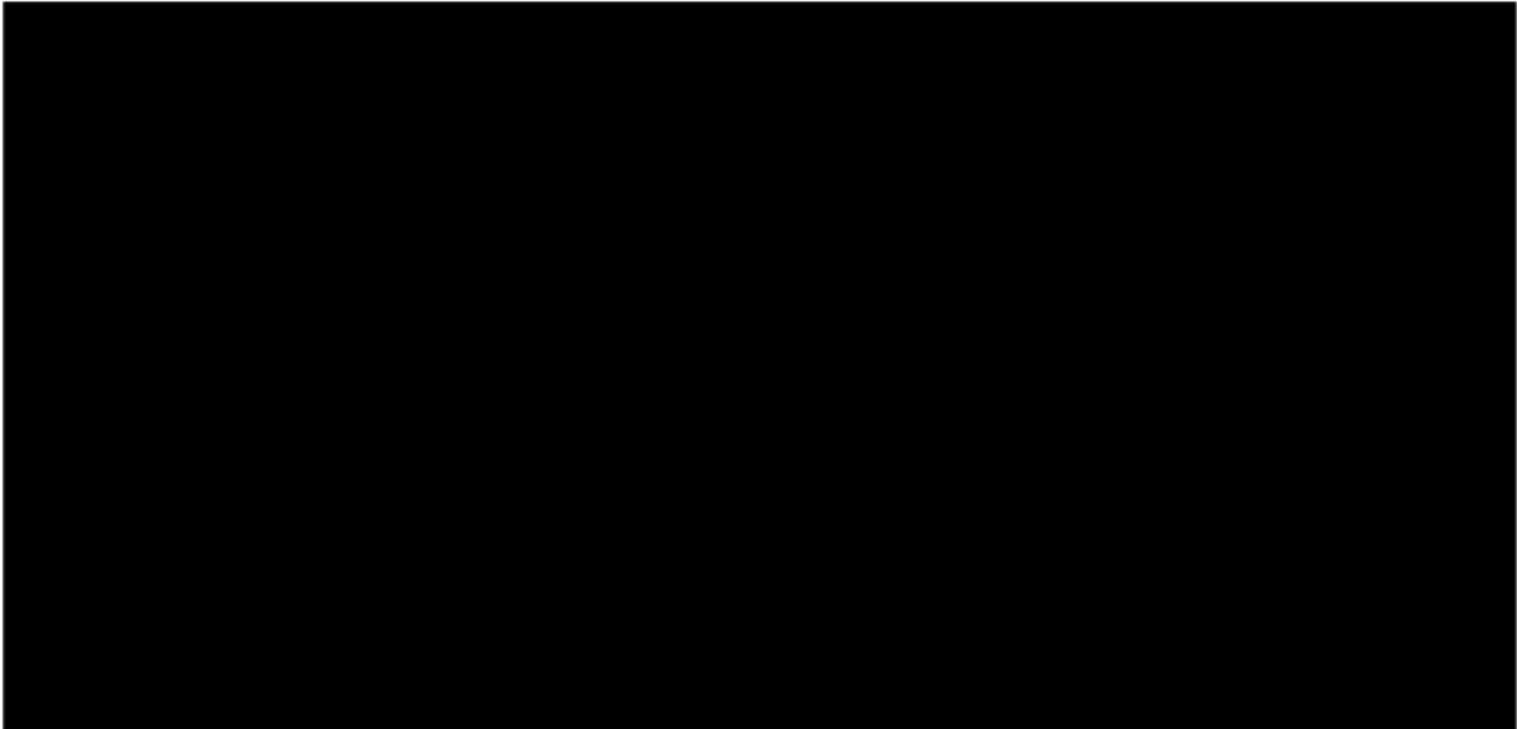

90A-NY-3151227 (death investigation)

- DVR Main Controller – The Administrator password is needed to gain access. NY Case Agent is working on it.
- DVR 1 System – This is up and running. The disk array appears to have assembled but we need access to the DVR Main Controller for visibility.

- DVR 2 System – **This is our priority and is currently problematic.** The system is up, but the disk array is NOT assembling. It appears the configuration of these 16 disks in the array has been lost (likely from being pulled out of the system live). 3 of the disks had to undergo repair before being useable. We will have to attempt to reassemble this array manually (if possible). Typically, we can look at the structure of the disks and find patterns that potentially give us clues into how they were assembled but a review today did not prove insightful.
- Asked NY Case Agent to reach out to MCC and request any documentation available there is of the configuration of this disk array or a technician there that can speak to it.
- Evidence tracking sheet attached.
-

31E-NY-3027574 (VCAC)

- Evidence from Virgin Islands still needs to be imaged once legal authority has been obtained (ETA next week)
- Mid-September is the target date for providing the AUSA with all the load files from the digital media seized from his NY apartment.
 - All documents exported from loose media and Windows machines have been exported for ingest into Relativity for taint review
 - 4 Apple desktops are still being processed
- 1 encrypted image sent to STXU; STXU identified password and provided it back to NY CART for decryption.
- Evidence tracking sheet attached.
