```
#
# Net::IMAP::Address represents electronic mail addresses.
#
# ==== Fields:
#
# name:: Returns the phrase from [RFC-822] mailbox.
#
# route:: Returns the route from [RFC-822] route-addr.
#
# mailbox:: nil indicates end of [RFC-822] group.
#           If non-nil and host is nil, returns [RFC-822] group name.
#           Otherwise, returns [RFC-822] local-part.
#
# host:: nil indicates [RFC-822] group syntax.
#        Otherwise, returns [RFC-822] domain name.
#
Address = Struct.new(:name, :route, :mailbox, :host)
