Spine and Sports Medicine
Hospital for Special Surgery
535 EAST 70th STREET
NEW YORK, NY 10021
Tele: [REDACTED]

Name: Jeffrey Epstein

DOB: 1/20/1953

Age: 63

Date of Visit: 7/7/2016

Referring Physician: Jennifer L. Solomon

CHIEF COMPLAINT:

Intermittent tingling bilateral lower extremities.

HISTORY OF PRESENT ILLNESS:

This is a 63-year-old gentleman who presents today for initial consultation regarding a several-year history of intermittent numbness and tingling. He has no pain. He denies any progressive weakness, bowel dysfunction. He denies any change in his quality of life.

ALLERGIES:

No Known Allergies Confirmed - 07/07/16 9:08:38 AM EST

PAST MEDICAL HISTORY:

Edema and parathyroid issues.

PAST SURGICAL HISTORY:

Appendectomy.

ALLERGIES:

He denies allergies to medications.

FAMILY HISTORY:

Diabetes.

REVIEW OF SYSTEMS:

Denies any weight loss, fevers, chills, bowel or bladder dysfunction.

SOCIAL HISTORY:

He exercises moderately. He is single.

PHYSICAL EXAMINATION:

He is 5'11", 175 lb, blood pressure 117/61, pulse 51. The patient presents today in no acute distress, alert and oriented x 3. Cervical range of motion is full. Lumbar range of motion is full. Strength is 5/5. Sensation is grossly intact. Reflexes are symmetric. No evidence of muscle atrophy, asymmetry or fasciculations.

RADIOGRAPHS:

Radiographic evaluation shows grade I spondylolisthesis at 4-5 with spinal stenosis.

IMPRESSION:

Spinal stenosis.

PLAN:

At this time we reviewed all of his findings. We reviewed his films and surgical and nonsurgical options. At this time I would do a trial of Neurontin to see if we can decrease some of his symptoms. We discussed this at great length. Follow up on a [REDACTED] basis.

PROBLEM LIST:

Spinal Stenosis Lumbar Region
