Leverage Target At Inception:	2X
Notes on Leverage:	We implement leverage of 2X, in other words at inception we upsize our positions by a factor two times greater than our volatility adjusted position sizing. Leverage levels can be customized to each investor.
T24M Sharpe Ratio:	1.29
Historical Sharpe & Notes:	Historical sharpe ratio is in excess of 2.0X (backtest from 1995, see Investor Presentation). Our sharpe ratio increases materially during market downturns in excess of 20 days of realized volatility. Since we generate positive returns in these environments, the variance in our downside volatility is materially less than broader markets. Recessions, which generally result in market directionality in excess of 20 days of volatility are significant alpha capture opportunities for us. Additionally, by never dollar cost averaging and concurrently adding to our winners we have an inherent asymmetry in our volatility profile.
