

Investment Objectives

Atorus ("the fund") is a global multi-strategy fund with a systematic bias. The Fund's objective is to achieve absolute average gross returns of 24% per annum with downside volatility half that of major equity and credit markets.

Atorus employs a risk-conscious and proprietary dynamic trading methodology that aims to minimize downside volatility yet still generate consistent uncorrelated returns in both up and down markets with low portfolio turnover. The managers diversify the portfolio with 400+ highly liquid positions globally across multiple asset classes; G20 rates, equity & credit indices, ETFs, and G20-listed equities. The Fund's investment approach combines three discrete modules; portfolio construction, directional bias and timing, and risk management. The portfolio is systematically constructed for reasons of

diversification, volatility, and low long-term correlation. The portfolio is constructed to be broad based, allowing the opportunity to generate returns irrespective of any one particular market. The directional bias of individual positions is the foundation of the strategy. Atorus makes proprietary calculations of changes in realized volatility and price ranges to systematically alter the timing of entry and exit for positions. This enables Atorus to operate regardless of a high or low volatility environment. The last stage of the investment process is robust risk control, with particular focus on mitigating drawdowns via position sizing, hold periods, leverage, entry/exit points, and volatility based rebalancing. Atorus is currently pre-launch, targeting an initial capital raise of \$100m for a launch date of Q3 2014.

Fund Characteristics and Metrics

Average # of positions: 400
Average net leverage (notional risk): 3.8x, 1.8x *Ex Rates*
Max leverage (notional risk): 5.5x
Asset class allocation: Volatility risk based

Sharpe Ratio: 1.2 (daily from 1995 to current simulation)
Average Annualized Return: 23.66% (1995 to current simulation)
Average position hold period: 100 days

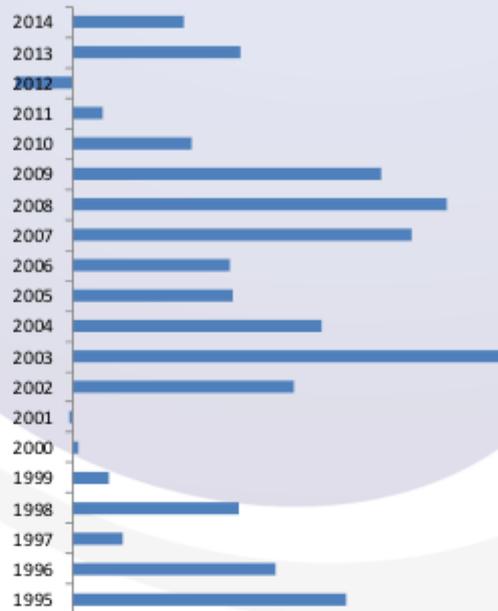

Scalability: Daily TDVT >\$1trillion
Position Level Liquidity: One day

Our Edge

- The managers have worked and traded together since 2007. Their backgrounds, experiences and strengths are different & complimentary.
- The team traded a \$100million portfolio of avg. risk for a European Bank from September 2011 to June 2013, achieving a profit factor in excess of 2X a win ratio of nearly 40%, while generating positive returns on months with large market declines.
- The Atorus methodology is an aggregation of deep understandings of complex trading systems and market forces. The managers are driven by their dedication to discipline, order, and operational excellence.
- The focus lies on consistency of returns with minimal downside volatility.
- Our 20 year simulation (details available on request) generates 24% gross IRR and only two down calendar years, -8.5% and -0.5%

The information contained herein does not purport to contain all of the information that may be required to evaluate an investment. Ability to achieve investment objectives may be affected by a variety of risks not discussed herein. A prospective investor understands the nature of the investment and can bear the economic risk of such investment. In considering any performance information contained herein, investors shall bear in mind that past or projected performance is not necessarily indicative of future results, and there can be no assurance that target returns will be met. The prior results of the principals is representative of their direct investment responsibilities utilizing the investment strategy methodology represented herein, but within a larger fund vehicle and may not reflect results of the vehicle. The investment strategy is speculative and involves a high degree of risk. Opportunities for withdrawal of funds are restricted, so investors may not have access to capital when it is needed. The portfolio composition, which is under the sole trading authority of Red Dot Trade Finance, LLC, may not be fully diversified and this lack of diversification may result in higher risk. Leverage, that is borrowing on margin, will be employed in the portfolio, which can make investment performance volatile, requires investment gains to be in excess of the cost of borrowing, and could result in losses to investors in excess of their principal. The investment strategy involves the purchase and sale of options and other leveraged derivative instruments, which can result in losses in excess of the capital in an investor's account.
