---

Could we do the stone all the way up to the ceiling?...then on either side, the wenge cabinets and shelves with thick fronts (each shelf would have a little puck light that we can have on dimmers) The cabinets to be set up by a base that is recessed back and under the cabinets (so you can see it...maybe it is made of mirror or stainless steel...should be like 5" high) Then have soffit and simple crown all wenge all the way up to ceiling...No Grey paint anywhere...Then the rest of the family room has no crown molding???
