8:00pm-cocktails and hors d'oeuvres

The Museum of Modern Art

The Roy and Niuta Titus Theater 1

11 West 53rd Street New York

██████████ or ██████████

White Gold is a front-line expose of the modern-day ivory trade-its effect on African countries and wider regional stability, its potential to fund terrorism and its global reach. Produced by professionals from the conservation, filmmaking and security fields, the film illustrates the awe-inspiring complexity, beauty and emotional intelligence of the elephant, Africa's most majestic and iconic wild animal. It documents how, as the demand for ivory escalates, the stakes rise for elephants, people and peace. And, amid growing speculation from analysts around the world that ivory is likely to have partially funded the September 2013 terrorist massacre in Nairobi, Kenya, the film poses the question: is this luxury commodity really so desirable, considering the ugly reality of terrorism and looming species extinction?

White Gold is an African Environmental Film Foundation production.

African Environmental Film Foundation is a non-profit charity, working year-round in Africa to produce educational films about environmental issues in local languages.
