 Latest Innovation In Skinovation

 dangene - THE INSTITUTE OF SKINOVATION

Dear Jeffrey,

At the Institute, we are constantly working on new ways to improve the appearance of chronic skin conditions.

Melasma is a skin disorder that causes severe discoloration and blotchy, hyperpigmented segments of the facial tissue. It is one of the most difficult skin disorders to treat or improve because of its precarious and volatile nature. Through our trials and innovative approach, we've been having more success than ever in lessening the appearance of this seemingly cureless condition.

For more information, [click here](#), call our office at 212-249-8172, or [email us](#) today to schedule an appointment.
