Circling back...might it be possible for Jeffrey to come in on Monday Dec. 12th to have the Limpoma removed?

However, if we wait until it is symptomatic to remove it, it will be much more larger then, and more difficult surgically to do because it is adjacent to critical structures - brachial plexus, major arteries. So, if we think it will grow to the point that it will need to be removed in the future, then it is better to nip it in the bud and remove it now - when it is surgically easier and safer to do.
