---

Good day Larry

The wires for the left side is sorted no jumps. The subs are still coming across balance on both sides. I am meeting with MR grey from the music shop later I have jotted the lay and settings to consult with him in hopes he may have an answer or suggestion to solve the problem.

Regards

Juan

We are scheduled to depart Sunday, May 12th  
Atlantic Aviation PBI at 3PM

N212JE  
Plan D, LLC

Arrival St. Thomas Jetcenter at 5:15pm Local.

Carlos

We will need 2 vehicles for luggage, we have a 175lb pound subwoofer, I will have Roy bring his belt loader to unload, this subwoofer is for LSJ home theater room.

Jermaine

Did you make any progress on the flag pole pole L/H speaker wire? For direct connection from Amps to speakers, with No Jumpers?

JE informs the R/H speakers are wired correctly,, JE said to use A balance speaker test, that you can find on YouTube to test left and right speaker operations and Balance.

FYI.

Thx,  
Larry
