Thank you Leslie, yes the trip was very successful and clarified the project for us. We were able to meet with Michael and tour both islands and the facilities that were recently added. We also discussed the project goals for Michael which allowed us to narrow our scope of services from our earlier discussions about various cable routes, etc. Additionally, we have examined 18 months of previous electrical usage to assist us in confirming loads and capacity for the LSJ consumption. Michael also provided with information regarding the seawater RO plant and distribution pumping system for purposes of developing and scope for providing a water line over to GSJ.

We are currently preparing two separate scopes/proposals. One for engineering of an electrical power loop around GSJ, to be installed by Owner's contract forces and one for project management and/or turnkey installation of the short run of submarine cable and water line from LSJ to GSJ including landslide power equipment and facilities on each side.

We are currently conducting some preliminary engineering activities in order to develop the scope and cost for each proposal and time frame for the work. We expect to have a proposal for the first scope of services (GSJ Electrical Loop engineering) to Michael for review on Monday, June 17th. The second proposal should come a few days after that as we are awaiting equipment delivery times and input from installation forces to complete the scope.

We also continue to speak with Michael as questions come up and we are speaking with Bioimpact as well to coordinate on the subaqueous permitting side of the crossing.

Thank you for assisting in setting up the visit and having us over.

Best regards,

Paul Gandy, PE
Globaltech, Inc.
