You are here? But there was always an orange sign on the screen instead of green, and now too. How are doing it?:)

Yes, that mean they couldn't evolve anymore, but that doesn't mean they were perfectly created, but they reached the perfection in their evolution, they went till the end of their development. I don't know how it was tested, that is just what I've read:)

2010/1/12 Jeremy <[REDACTED]>

Umm...no. So that means they couldn't evolve anymore? What is completion? Does that mean they were perfectly created & how is it tested? I'll look it up too. It sounds interesting.

Mutations in genes may reduce new characteristics to appear, which certain species haven't had before, that is a necessary process for evolution. Dinosaures practically had no more mutations in their genes, they could not change any more, that is their genetic program had been accomplished, it was realized and carried to its conclusion. Does that make sense now?:)

2010/1/12 Jeremy Stiffler <[REDACTED]>

Haha...yes, believe it or not I did know that. Sorry to ruin it for you.

But I DIDN'T know that they had practically no more mutations before they went extinct. What does it mean that their genetic program had been accomplished?

Oh, you really know that?!:) and I thought I'd surprise you:/ So, you may sleep well now, couse you'll never ever see those terrible dreams about being chased by dinosaurs to an outer space!:)

Actually I wanted to tell you one fact I've found out not long ago. It was proved, that dinos, before they become extinct, practically had no more mutations in their genes (mutations is a necessary factor to evolve), and their genetic program had been accomplished! That's amaizing fact, don't you think?

2010/1/11 Jeremy Stiffler <[REDACTED]>

Glad you found it!

So what was the question about dinosaurs??? PLEASE tell me one fact about dinosaurs!! Wait, is it that they are extinct....because I already know that. ;)

Huuh, I've found it in the spam folder, probably I've pushed somewhere accidentally and haven't noticed.

Hmmm...I'm not sure. That's strange. Are you sure you were looking in the right place? I've never heard of that happening before.
