Hey scott.. for tomorrow at 71st, the Epson Pro 3800 won't print for some reason from my laptop. I plug it into my computer, set up something to print, then in the print box it says connecting to printer, then just says "Error" in the status section. It won't do anything. I've restarted the printer, my computer, unplugged, replugged, doesn't help.

On the Epson Aculaser on 5th floor, it is now putting a lovely yellow line down the middle of all my scans; not sure what that's from

also on my laptop, the address book is doing that thing again where it won't allow my to search names.

I'd like to look into having a shared calendar with Lesley on our icalendars as well if you can show us how to set up.

At 301, I have the 3 airport expresses for apts 11P, 8H and 10B to set up for wireless.
