Hello Ms. Experton,

Can you talk to Valdson to get quotes on replacement refrigerators that would fit into existing space.

Thank you,
Bella

Referring to the frig, Valdson tells me today that the system for making iced cubes still does not work properly. The person who came to look at it tried to repair it but it's not satisfactory. The frig is working but the system for making iced cubes is not. And Valdson needs to turn the frig off often (every other day) to have it defreeze.

This frig was installed by Pinto. It's a frig from an American manufacturer and it's difficult/impossible to get spare parts in France.

Reminder:

*frig references: (amana iowa) (model brf520tie) (mfgnop13210wb) s/ 014124389 0.128kgr134a 23v 50hz
spare part to be replaced: "kit fabrication glaçons".*

Would you think appropriate to look for the spare parts to be replaced in the US? If yes, please advice, so Valdson tries to get the exact references of the spare parts. However there will be no guarantee that it will fit and work when replaced.

Best regards.
