Mr Epstein,

You will find attached 2 proposals, First one with B&O screen, second one with panasonic.

To understand it properly you will need those few informations :

With B&O :

B&O screens only work with the core system unit Beosystem3 : it means that you need to buy the screen + beosystem3 but also B&O speakers

It is not possible to only buy the screen without changing speakers for B&O speakers

In your case i can change the front speakers because i can run new cables, but i can't change rear speakers.

That was the bad point.

The good point is that i can control DVD and Decoder with the B&O remote control , so no need of any universal remote control

So the B&O proposal includes : screen + 3 front speakers but no remote.

With Panasonic :

I can do what i want.

I can put the panasonic screen

Keep the Bose speakers

I change the AV receiver

I add a control4 remote control but you can also control the system with your ipad.

Bad point is that the B&O is better looking than the Panasonic

In both cases Screens are 3D

the picture of the B&O screen is with a speaker but we don't need to put that speaker

The panasonic is in Black aluminium (not plastic) and looks good too

Let me know what option you prefer

There could be a bigger delay for B&O

Please let me know if you have any questions

Best regards

Philippe
