Adaptec Easy CD Creator 4.02 Standard Edition  
(c) Copyright Adaptec, Inc. 1994-2000  
-----

Welcome to Adaptec Easy CD Creator 4.02 Standard Edition.

The following information is available in this README file:

1. INSTALLATION
2. WINDOWS 2000
3. EASY CD CREATOR 4.02
  - 3.1 IF YOU ARE RUNNING VIRUS SCAN
  - 3.2 CANCELING A DAO RECORDING
  - 3.3 ADDING ABSTRACT, COPYRIGHT, AND BIBLIOGRAPHY INFORMATION
  - 3.4 BACKWARD COMPATIBILITY FOR LAYOUTS
  - 3.5 CREATING A CD EXTRA FILE IMAGE (\*.cif)
  - 3.7 WORKING WITH 80 MINUTE CDs
4. JEWEL CASE CREATOR
  - 4.1 PRINTING ISSUES
  - 4.2 TEST PRINT
5. ACCESSING THE CDDb DISC RECOGNITION SERVICE
6. USB DRIVES
7. GENERAL TROUBLESHOOTING

-----  
1. INSTALLATION  
-----

We recommend that you do not install earlier versions of Easy CD Creator over Easy CD Creator 4.02.

-----  
2. WINDOWS 2000  
-----

Easy CD Creator 4.02 supports Windows 2000 Server and Professional Editions.

-----  
3. EASY CD CREATOR 4  
-----

3.1 IF YOU ARE RUNNING VIRUS SCAN

You may experience buffer underruns if you are running this application while you are burning a CD. If you encounter this problem, you should close any other open applications or try lowering the write speed.

3.2 CANCELING A DAO RECORDING

If you select "Cancel" when doing a test run of a Disc at Once disc, Easy CD Creator may not return control to you right away. A few drives exhibit this problem since they don't return control to Easy CD Creator in a timely manner.

3.3 ADDING COPYRIGHT, ABSTRACT, AND BIBLIOGRAPHY INFORMATION TO A CD

Copyright, Abstract and Bibliography information (under the CD Layout/File system tab) must be in the

form of a text file to be valid.

There are two ways of selecting these files. You can add a text file by browsing (click on the browse icon located at the right of each of the edit boxes) and selecting the file that you want. Or you can type a VALID file name within the edit boxes.

### 3.4 BACKWARD COMPATIBILITY WITH LAYOUTS

Layouts from previous versions of Easy CD Creator cannot be opened or read by Easy CD Creator 4.

### 3.5 CREATING A CD EXTRA FILE IMAGE (\*.cif)

When you create a file image for CD-Extra CD (\*.cif) in either Disc At Once or Track At Once mode you must use the same recording method (DAO / TAO) when you record it to a CD.

### 3.6 WORKING WITH 80 MINUTE CDS

Easy CD Creator supports 80 minute CDs. If you are recording to an 80 minute CD and would like the Easy CD Creator layout screen to reflect this, double-click in the Estimated Time area in the Easy CD Creator 4 Status bar and select "Estimate Based on 80 Minute CD."

=====

## 4. JEWEL CASE CREATOR

=====

### 4.1 PRINTING ISSUES

The front/inside insert art will only print completely on plain paper or stock types that fold. Printing the front only will print part of the inside on the left of the stock.

### 4.2 TEST PRINT

We suggest that you perform a test print on regular paper first to check for correct alignment. Printer offsets can be adjusted using Printer Adjustments dialog. Click the Adjust Printer option in the Print dialog.

=====

## 5. ACCESSING THE CDDDB DISC RECOGNITION SERVICE

=====

If you use AOL to access the Internet, you will need an active Internet connection prior to attempting to access the CDDDB Disc Recognition Service.

=====

## 6. USB DRIVES

=====

If you are using a USB CD-recorder, it is recommended that you use a recording speed of 2X.

=====

## 7. GENERAL TROUBLESHOOTING

=====

Audio tracks recorded on CD-RW media may not be playable in home or car stereos.

Not all CD-ROM drives support digital audio extraction. Easy CD Creator will notify you if it cannot extract audio from your CD-ROM drive. In this case, we recommend you use your CD-R/CD-RW drive to extract audio.

If you are copying CDs or audio tracks from a source ATAPI CD-ROM drive, you may experience buffer underruns if your CD-ROM drive is not fast enough to keep up with your CD-R/CD-RW drive. If you

experience this, you should try reducing your write speed to 1x, or buffer to your hard drive first.
