Add the audio files (music CD tracks, WAV, or MP3 files) that you want to record to the Audio CD Layout-the lower half of the window.

To add audio files:

1. Select the CD-ROM drive or folder where your audio file is located.

2. Select the audio file, and then click the **Add** button on the toolbar.

3. Repeat until the Audio CD Layout contains all of the audio files that you want to record.

    Note: To record tracks from more than one music CD, insert each CD into your CD-ROM drive, and then add the tracks to the layout as described above.
