**Subject:** Thanks so much for Xmas Pressi.. & Waving your connection wand!...  
**Date:** Tue, 17 Dec 2002 22:47:58 +0000

---

PLEASE NOTE MY NEW EMAIL ADDRESS

Hi there, thanks so much for thinking of me! really appreciated it.  
we will be in Paris for Xmas. Where will you be?

My colleague and partner David Russell - Director of the Institute for Scientific Simulation - will be in Los Angeles from Thursday through to the whole weekend - If your magic connection wand can wave in the direction of Tom Hanks to pass on this information attached here- It would be really great if I could engineer just a phone conversation between him and David Russell - it would be really terrific....

David Russell, who is a theoretical physicist and mathematician by training ( by the way Murray Gelmann met him and really got on well with him- David also created the first two commercial math programs made for Apple) has created an extraordinary systems engineering simulation modeling capability that significantly helps in the building of space and aerospace projects. He has already garnered very significant contracts with the airforce/army etc in the US... Anyway, with Tom's well known interest in space and in building private space launch vehicles - I am absolutely positive he would be extremely interested to know about what David has done ( from a significant cost and time savings point of view for the building of space related projects.

I have become a senior partner at a new California limited liability Company located in Monterey, California named the Institute for Scientific Simulation.  
(See [REDACTED] - though please note that the web site is not yet

*designed - material is up there to enable easy downloading of information at this time for potentially interested investors*). I met the Director of this Institute, Dr. David Russell, through a chance meeting with one of his other partners at last

Summer's Internet Society Conference in Washington DC, while I was still

a Trustee on that non profit Board ([REDACTED]).

There is a very exciting investment opportunity open for a further few weeks only. I have decided to join Dr. Russell because I think that under his leadership, practical artificial intelligence (AI) can finally revolutionize the way people work with computers on a day-to-day basis. I feel that David is uniquely gifted. He not only wants to make a significant difference in the world but he also has the creative brilliance of mind, vision, business expertise and the dedication to work out how to accomplish his dreams and help many others realize theirs in the process. David started the Institute to "infuse" companies and other enterprises with advanced computer technologies and once you read his Bio (attached to this email for reference), I think you will find out why I have been motivated to join him. He has already successfully recruited other leading technical experts to join him in building the Institute.

They are all very special people too. ([REDACTED])

David has established the immediate course for the Institute to be improving the way engineering enterprises use computers to accomplish their goals. He has a vision for revolutionizing the engineering development process (for the engineering "life cycle").

He wants to help improve the process the same way that large database management systems supported the improvement of business enterprises over the past thirty years. He and his technical development team have designed a software systems technology called ACES ("Advanced Collaborative Engineering System") to support this vision.

As I have only recently met David, I do not yet feel qualified to describe his approach or technology, but I can tell you that I have talked with many top

professionals that are very impressed with his approach and with GENSAT, the earlier version of ACES that he built at his previous company.

I think that once the potential angel investor examines some of the ISS material, (see suggested documents for the person to view attached to this email)

and then has the opportunity to first hear what his vision is, they might get quite excited. David and the Institute are currently extending a fantastic opportunity for an initial \$200,000 IP investment. There are some potentially substantial returns for getting involved with ISS at this early juncture...

**Re: Contracts Already in Hand and Close to Hand.**

(In a short time frame, Dr. Russell has already lined up two exciting contracts with terrific follow-up potential from work performed over the next two months.

These require the use of GENSAT and they have a good chance of leading to contracts for the next generation of GENSAT - ACES. The follow-on contracts have the potential of being ten to 100 times larger, if the first two are successfully executed in the this short, allotted time period. Two other proposals are already under review at USAF and the Navy, with the Navy one having a very good opportunity to become a definite contract within the next two weeks. In addition, the Office of the U.S. Under Secretary of Defense is pursuing an opportunity for ISS, as well.

I would really appreciate it if you could find time to arrange a call between

David and myself and any significantly interested contact before the end of this week if any person, after reviewing the listed materials, has a significant interest in doing so.

David's contact information is below -

Thanks so much in advance for any help you may be able to be to me in this regard.

CHRISTINE.
