Migrating to NT based Operating Systems after installing  
Norton AntiVirus

-----  
Migrating from Windows 98 or Millennium to Windows 2000  
or Windows XP will cause Norton AntiVirus to cease to  
function. To migrate successfully uninstall Norton  
AntiVirus 2002 before the migration and then reinstall  
after the upgrade is complete.

Incompatibility with Office 2000 and the Norton  
AntiVirus Plug-in on German Windows 98

-----  
Office 2000 can hang when inserting infected documents  
on German Windows 98. This is resolved by upgrading the  
DCOM version to version 1.3 or later. This upgrade can  
be downloaded from: <http://www.microsoft.com/com/>
