

**1. Mosquito article**

“Evolution occurs rapidly at every level of biology, due to inadvertent survivors,” Jeffrey Epstein noted, whose foundation established the Program for Evolutionary Dynamics at Harvard. “The concept of evolution being driven by active learning within the organism however, is an exciting new field of evolutionary research.”

**2. Linking Environment with Evolution**

“The Penn State, Rutgers University study emphasizes that evolution does not occur evenly through time, but rather in dramatic spurts through the course of nature’s history,” Jeffrey Epstein remarked, whose foundation backs cutting edge science around the world and established the Program for Evolutionary Dynamics at Harvard University which studies evolution through the lens of mathematics and biochemistry.

**3. Innovation and Philanthropy**

“Google’s initiative to sensor water wells, is a key example of how inventive philanthropy can uniquely assist societies in all fields from medicine to conservation and agriculture,” Jeffrey Epstein asserted, whose foundation supports cutting edge scientific research around the world and financed the Program for Evolutionary Dynamics at Harvard University.
