Oncologist
License No. 15606 Specialist license No. 10084

Impression and Recommendations:

Very slow progression of metastatic breast cancer with little metastatic spread. At the present time, the main problem is a mechanical one of T1 vertebra.

If she refuses surgery, I would consider focused stereotactic radiation to T1.

Regarding the oncology treatment plan:

- Continue taking Letrozole + ovarian suppression + Xgeva
- Systemic evaluation after 4 months of therapy
- Axillary US and tumor markers after 3 months of therapy

Sincerely,

Noa Efrat (Ben-Baruch), MD
