

Smart Solutions

Steel Building Systems
Faster Construction > Lower Cost > Expandability

Smart Solutions... Smart Choice.

The Braemar Building Systems team is dedicated to providing you with first-rate customer service and satisfaction. With over 30 years of experience, we know the advantages pre-engineered steel buildings can offer. Our designers, engineers and construction staff will ensure you get the best value and smartest solutions available for your project.

Faster Construction

Compared to conventional buildings, metal buildings save between 30 and 50 percent construction time. Less hours and less labor costs equal substantial savings for you.

Lower Energy Costs

A properly insulated metal building will dramatically reduce heating and cooling costs. Uniform and consistent structural framing enable a great deal of flexibility in the type of insulation used.

Lower Insurance Costs

Steel buildings are non-flammable which means a significant discount in insurance costs. Properly designed and constructed steel buildings are safer than conventional structures, with a proven track record of being extremely resistant to wind, rain, snow, seismic activity and fire.

Lower Maintenance Costs

The long life, factory applied finishes on Braemar's metal buildings reduces both short and long term maintenance costs. Insect damage, rot and structural deterioration are practically eliminated.

Attractive Appearance

Braemar prides itself in designing metal buildings that are both attractive and economical. With over 30 years of experience, Braemar's building specialists have a wealth of ideas and suggestions to insure you get a building that meets your aesthetic needs at the best price.

Expandability

Over time may come the need for future expansion. Metal buildings are wonderfully unique in this area. Ask your Braemar representative during the planning stage of your project about how we can make your future expansion economical and practical.

Smart Look.

The walls and roof of every Braemar steel building arrive pre-finished with your choice of color and texture. Additionally, steel buildings can be enhanced with glass walls, stucco, brick and a variety of other treatments.

Visually attractive and functionally efficient glass facades and the smart-looking appearance of metal sheeting and roofing demonstrate the wide range of options we offer. Ask your Braemar representative about the architectural features available for your project.

Smart Choice.

From Braemar's first cost estimate to turnkey completion, every project is specifically engineered, detailed, manufactured and constructed to exceed your expectations.

We employ customized computer applications at every stage of your project, so that production flows smoothly during design, budgeting, cost control and critical path planning, right through to construction.

Braemar Building Systems has extensive experience with a wide variety of metal buildings, from sports arenas to aircraft hangars, as well as warehouses, office, commercial and industrial structures. You can feel confident knowing we have the expertise to bring you a maintenance-free steel building with superb structural integrity.

We invite you to call today for your free estimate and to discuss your building needs. Braemar Building Systems guarantees we'll deliver yet another smart solution for your project.
