Subject: ok the plan for LSJ per conversation in oval office tonite with JE
Date: Wed, 05 Jan 2011 07:08:37 +0000

First lets buy one of these to see how we like it

<http://ayrstone-productivity.amazonwebstore.com/Ayrstone-AyrMesh-Hub/M/B003VKXHKG.htm>

Jee if you want to buy more thats fine, but I think we should start with **one**.

Its an amazon web store so it is very easy to buy if you guys have an account

Your new computer for LSJ:

you were deciding on whether you wanted an **imac** or **mac mini** into **large flat panel tv**

so let me know if you have given that more thought

Apple airport extremes, well we got 7 for your **house** so for the **island** lets start with 10

just like 71st there was/is a wireless network their already just the Apple network I think will be better as I hope 71st has shown.

SO the last thing I wanted for this trip was an att 3g usb card with best, plan available now this can be a super pain in the butt sometimes that is why I was soooo tempted to just go buy the thing myself today but that was a major error in thinking on my part sorry guys.

But I don't know if it would be quicker / easier to have [REDACTED] to buy this or whether you think I should ??? cause for now its the only option for a back up network to the island. I hope to be given time to work with Jermaine to contact the ISP vendors myself in St Thomas and see if all the options have really be explored yet, as we are unwinding almost everything except the quickbooks operation. but I have that plan in the works (which you both got copies of) when we get ready, which to me is I visit each location at least once but prob more like 3 x but you know better than me JE what will work for you.

OK

TO SUMMARIZE

1 LONG RANGE ATTENA SHIPPED TO LOCATION\$350
10 AIRPORT EXTREME BASE STATIONS\$1900
ATT 3G USB CARD TOP OF THE LINE DATA PLAN\$80-150 A MONTH? (there are so many variables)

unknown is what model/kind of computer set up do you want for your office?\$ 1,500 - \$15,000 depending on what flat panel TV you get

So please give me a line item ok as we all agreed that is going to prevent the mis-step of a printer, and speakers, from the last order. I do very much appreciate you letting me keep the monitor it will be a big help, as I love the

11" note book for fieldwork, running around your house etc.... but when I sit at my desk monday through friday 9 am to 5pm having that screen will be a huge huge help so again thank you JEE for that.

So HBRK, get final equipment delivered to 71st, then get to 71st, finalize and pack whats going on the plane, return to HBRK (with monitor and gear to be returned to tekserve) finalize what I need to bring to LSJ from HBRK, bring Sue's computer (to get the final word from apple on repair cost), printer, and speakers to tekserve to get credited and drop off repair.

If I am missing something please let me know.

Thank you,

Scott

PS

JE can you send me the link to the wall mounted Genelecs you said you were interested in so I can get a quote for you from tekserve on those?

Also I forgot to tell you my skype test over wifi from iphone was very good, [REDACTED] said the sound was very clear so lets keep that on the radar as an ip phone solution because the cost of ipods and skype could cut those costs dramatically while giving you and the team the added benefit of zero overhead as far as out side support and configuration plus it would completely eliminate any hardware bottle necks being created by the wired voip lines and dual data connections from the same vendor (which is interesting, and I wonder if I can find a way to teak it , but the concept of dual network channels in general is for isp redundancy, in case of outage from one vendor you can switch to the other, i have that at my house, I have time warner cable and verizon dsl so I can have near 100% uptime) the lsj network needs more study to maximize bandwidth due to the infrastructure issues of USVI itself.....

thx sd
