Freak out over chance of breast cancer? Ehm, it's me... I have a fairly high tolerance for dealing with 'things that could kill you' (unless they are Russian).
Don't worry about it, I'll have another doctor do it.

not that simple , ill think about it, they make a whole big deal about the doctor patient responsibilities as many people freak out when they find that they have an 80 percent chance of breast cancer, means little at your age.

Got it. It's surprising that it would not account for age, race, gender etc..
I just got my [illumina](#) kit. Looks like I need a doctor to sign off on the application to send in my blood and get results. Can I ask Kruger or Eva to do it?

probabilites are never described as accurate. if I tell you its 50.percent chance of rain, does that mean , it rains 50 percent of the time, one hour on one hour off. . does it mean if it rains at all for 1 minute, but in the past on these days, it only rained one out of every two days going back 100 years. so what. . genetic tests don't exempt blacks. fat people, old people. chinese people. . so if all the blacks had it , and not one white person it woudl still say you are 20 percent liketly to get it , becace blacks make up 20 percent of the population. . Is a twin engien more likely to have an accident becauser there are two engines both with the same liklihood of failure.

Well if it's identified it can probably be reproduced. Are there hyper fucking mice running around somewhere?

I'd like to know if it says you are predisposed to something, is it pretty accurate?
