Subject: Choice Fiber (VINGN) Update

Date: Thu, 05 Nov 2015 20:32:04 +0000

Good day All

Choice did the primary setup with the router and spent three hours on LSJ. There are configurations (IP and Circuit ID Protocols) that VINGN and Choice are working out in order for Choice to be able to go into the VINGN network and this should not take more than 6 -12 hours. In addition, there are special patched cables which are designed to receive and send information on one strand of fiber verses the standard two strands; one is to send and the other is to receive information. The cables are used by Choice to connect to VINGN. We do not currently have the cables and Choice will source and install them at no additional cost to us.

The new date for VINGN to come on line is November 11, 2015 or sooner.

I reviewed Terrence's current setup with Choice's IT person, Hector. There will be some modifications needed to his setup in order for Choice to have total control of the fiber link and both the LSJ and Bovoni Tower Dragonwaves. The new completion date for the backup link (Dragonwaves) to be synced with the system is November 20, 2015.

Hector's plan is to get LSJ on the VINGN network first, as quickly as possible, and then work to sync the Dragonwaves as a backup link into the system.

Regards

Jruan
