Different issue / can we discuss a C3 thing that came up tonight? Tomorrow like 930 my time/ 1230 yours
AND below am working on this DRAFT email - any thoughts?

I'm right around my halfway mark for the 6 month assignment at bgc3 and I want to sincerely thank for making it all possible because I know it wasn't easy. Hopefully the Israel science/tech landscape, and emirates tech landscape will be good for thought and maybe even investment.

And, later next week I will send you some ideas that I think may be able transform the dementia space in a way that you would thoroughly enjoy - There are many avenues you might consider ie. new ways to subsidize risk, open up data, reduce costs, unlock the vast biomarker backlog and maybe even create some new financial products. . My assessment is brief but includes price tags, partners, people and institutions and is conceptualized so it can become either a menu of some very cool bets or a portfolio where you might quietly shape greater impact.

I've learned a lot about c3 in these 3 months and I would appreciate it if you'd consider a bit of a pivot.

I would like to do something similar to a Modern Neuron (like Tiny's Modern Electron) or maybe even take one of the Alzheimer science ideas to scale. I'm

ready and excited to carry some of these ideas to fruition.

I've got a little time to shape ideas as a David Rockefeller fellow - and with your help and guidance I believe I could be a significant part of something great. For the past 15 years I've dedicated myself to you and your family, and am very grateful for the opportunity that you have given me. . There is more to do. . exciting stuff.

Your support has always been a super important of my life and now it is more relevant than ever.

As you will see when [REDACTED] starts to branch beyond medical school - women in science/medicine will play an ever increasing role. What do you think?
