Different issue / can we discuss a C3 thing that came up tonight? Tomorrow like 930 my time/ 1230 yours

AND below am working on this DRAFT email - any thoughts?

I'm right around my halfway mark for the 6 month assignment at bgc3 and I want to thank for making it possible because I know it wasn't easy. Hopefully the Israel science/tech landscape, and emirates tech landscape will be good for thought and maybe even investment.

And, later next week will send you my list of ideas that I think could transform the dementia space in a way that you would enjoy - as I've proposed new ways to subsidize risk, open up data, reduce costs, unlock the biomarker backlog, create financial products and even drive new science. My assessment includes price tags, partners, people and institutions and is conceptualized so it can become either a menu of cool bets or a portfolio where you can quietly shape greater impact.

I've learned a lot about c3 in these 3 months and I want to ask if you'd consider a bit of a pivot that invests in me and my future.

I'm not sure exactly what that looks like yet - either something like a Modern Neuron (like Tiny's Modern Electron) or maybe even take one of the Alzheimer science ideas to scale. But I think I'm ready to do something bigger in science with prominent scientists and even investors.

I've got a little time to shape ideas as a David Rockefeller fellow - but ideally would like to move forward with my own baby steps within the next year.

Your support has always been a super important of my life and now more than ever as I try to pursue my own dreams. As you will see when [REDACTED] starts to branch beyond medical school - women in science/medicine can do great things. I want to be one of them. What do you think?
