Jeffrey

Attached proposal for Main Cistern Repair, also spec's on specialized material to use for coatings.
The cost to repair cistern #2 is \$20,876
this includes labor, materials and the replacement of corroded fire system piping
Scope of work is outlined in proposal.

Please note I have not yet inspected cisterns 1 and 3, if repair is required the cost will be \$14,300.00 each
to repair cistern #1 would require filling both 2 and 3 and then shutting RO system totally until repair is
complete
The difference in cost between 1&3 vs 2 is the piping and corrosion removal in cistern 2.

my recommendation would be to repair cistern #2, upon completion review 1 & 3
worst case scenario total estimated cost would be \$60,571 for all three.
