Going Gray-Where Technology's Headed - Entering the Gray-Tech Revolution

World Market Media - Brittney Barrett
- February 16, 2011

Over the next 20 years, 80 million baby boomers will enter their sixties and seventies in the U.S. alone. In the next 40, the number of senior citizens will double. For the government, this represents a huge financial burden resultant from rising Medicare and Social Security costs. For industries focused on late-life care and creating products that cater to the

aging demographic; however, this population shift represents a major opportunity.

Do you know what the Most Innovative Location Device is?

No it's not a compass or an astrolabe. It's not semaphore or a smoke signal. Not an RFID tag or a neon sign or phosphorous flare either.

Give up?

It's the **GPS Smart Shoe™** recently mentioned in **Forbes Magazine**, developed by **GTX Corp (OTCBB: GTXO.OB)** and licensed to **Aetrex Worldwide**. Yes, a shoe...well a very smart shoe as it can tell a caregiver the precise location, bearing, history, speed and altitude of an Alzheimer's victim that has eloped or wandered. No small feat – pun intended – to reduce the overwhelming stress on the millions of victim caregivers while potentially saving thousands from injuries and death owing to exposure, accidents and criminal activity. The GPS Shoe also reduces the manpower drain on municipal services; fire, police and welfare agencies often enlisted to locate the mentally ill.

While a Finalist in the Most Innovative Location Device category of the Locations & Beyond Summit and the People's Choice Awards is a wonderful acknowledgment for the years GTXO invested in developing the solution and the promise that **Aetrex** has made in bringing the Shoe to market... the real winners are those touched by this devastating disease

for which there is no cure, but now have a new measure of hope.

'Nanatech': Seniors Stay Independent With Tech Gadgets

Senior Tech - Ashlea Ebeling, 09.15.10

The GPS shoes from GTX (GTXO - news - people) tackle another senior problem--folks who have Alzheimer's who wander and are at risk of getting lost or injured. A GPS device in one of the shoes will alert a caregiver if the wearer leaves a specified area. Don't expect the latest styles from Nike (NKE - news - people) or Steve Madden (shoo - news - people) . The manufacturer is Aetrex Worldwide, an orthotic and medical specialty shoe maker. Roll-out is expected by year's end.

Keeping an eye on Mom and Dad

Remote monitoring technology aims to keep seniors in their houses and out of nursing homes

Over the coming months a raft of new-and-improved remote The Star monitoring devices will hit the market, from [GPS shoes](#) that can track the whereabouts of wandering seniors to MedCottages, portable RV-like units equipped with motion and monitoring systems that allow seniors to maintain some independence from the backyard of their adult childrens' homes.

"As we age, this is going to be a growing trend," says Laurie Orlov, a Florida-based expert on so-called "aging-in-place technology" aimed at keeping seniors in their houses and out of nursing homes as long as possible.

"We have to get past the fear and antagonism among the older people who need it the most. I don't think they're that technology-ready, but the boomers, who are their adult children, certainly are."

Motion sensors strategically placed in the three-bedroom home where Howe has lived for 53 years feed information right to her daughter's laptop, detailing when she got out of bed (the Friday we chatted it was 9 a.m.), walked into the bathroom (9:15 a.m.) or hovered at the kitchen table where she keeps her pills (9:30 a.m.)

Even her blood-pressure reading (165/76) is fed to her daughter's computer, along with her daily weigh-in tally, providing a detailed graph

which she often takes to her doctor appointments.

The only thing GrandCare can't tell Pierce, because her system doesn't include cameras, is if her mother actually swallowed her pills.

Monitoring and in-home help technologies will be a \$20 billion U.S. business in North America by 2020, predicts Orlov, founder of Aging In Place Technology Watch.

Already some baby boomers are able to remotely lock their parents' doors, track calls coming into their homes and even see who is ringing the doorbell, in many cases right from their smart phones.

Systems such as QuietCare, WellAWARE, FineThanx and SimplyHome are already fixtures in some U.S. homes and seniors' communities, although Orlov estimates fewer than 10,000 units are in active use because the systems can be so costly.

Next month, Paul Whyte, a Markham dealer of smart-home technology that allows ordinary electronics and appliances to communicate with each other, will unveil the GrandCare system at the Zoomer show in Toronto.

"I call it the invisible caregiver," says Whyte of Cybernetics Systems Inc. "The minute I saw this system I thought, 'There's something that actually makes sense.'

The key, of course, with all these technologies is that the senior be relatively able-bodied and sound of mind — most are of limited value if the senior is suffering from dementia, which is expected to become a major public health issue in the next few decades.

But developers are also working hard on that challenging front.

Sometime later this fall or next spring the first GPS-equipped shoe, the Aetrex Ambulator, will go on sale through www.gpsshoe.com or www.foot.com.

Originally designed for children by Los Angeles-based GTX Corp., the new shoes are expected to retail for about \$250 U.S. They enable caregivers to track those afflicted with dementia or Alzheimer's thanks to GPS and cellular technology that will relay their whereabouts back to a monitoring centre.

"Privacy may be a talking point, but it's not really an issue," says Patrick Bertagna, chairman and CEO of GTX Corp.

MEDCottage creator Dupin expects concerns around privacy will fade quickly as families and health-care systems here and in the U.S. become overwhelmed by aging baby boomers — more than 76 million in the U.S., 10 million in Canada — who start hitting 65 next year.

“I see remote monitoring becoming an integral part of health care as we all age,” says Dupin. “One of the issues around aging in place is going to be making trade-offs. Privacy may be something we have to give up.”

Susan Pigg focuses on issues about aging and baby boomers. spigg@thestar.ca

Tracking Deal

A downtown L.A. company that creates GPS tracking applications for cell phones has announced a deal to provide its friend-finding apps on Samsung smart phones.

The deal could mean more than 40 million more downloads, which would translate to increased revenue, for GTX Corp.’s application, which is currently available for the iPhone, BlackBerry and Android phones, said GTX Chief Executive Patrick Bertagna.

The LociMobile tracking applications send a GPS signal out to all of a person’s cell phone contacts who use the app. Bertagna said the app can be used to meet up with friends or keep tabs on kids.

GTX has also developed a GPS shoe for tracking Alzheimer’s patients.

Staff reporter Natalie Jarvey can be reached at njarvey@labusinessjournal.com or at (323) 549-5225, ext. 230.

Resources and Technology to Help Caregivers Cope

Kirk Johnson - NYTimes.com - May 4, 2010 - One Alzheimer's wanderer in Arizona had lost much of his memory, but not, apparently, his interest in fashion: he never left the house without a beloved baseball cap on his head. So a trick the family used to keep the man around was to hide his caps.

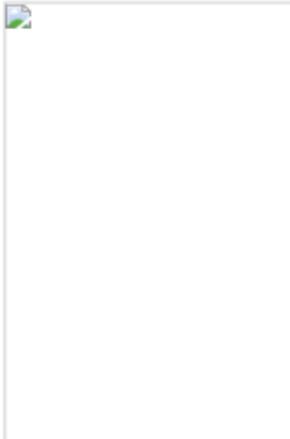

Search-and-rescue experts who deal with dementia patients also recommend alarms on doors that sound when opened if a proper code is not entered, along with posters or wallpaper images that disguise or conceal doors. Sometimes a simple large, emphatic sign on every door saying "Stop!" will deter a wanderer.

New App craze brings back the 1990's

World Market Media - April 9, 2010 -

Every Portfolio manager I've ever known loves to find a sector with wind at it's back..the early users of the "CrackBerry" knew (Nasdaq: RIMM) was the stock he/she needed to invest in because every person on Wall Street had one. This phenomena doesn't occur often and RIMM's are as rare as Australopithecus. I observe the current app craze as the new

cycle for lightning quick revenues based on the size of the market itself. Certainly anyone with an iPhone or Android phone has imagined that they could build an app when they got home that night...I know I did.

I can tell you from experience that when Kleiner Perkins doubles the size of its venture fund specific to app's you know your watching the ship turning in the harbor. This is a unique space with wind at it's back and certainly the app's market is a niche to watch, we found this company and had a chance to speak with Patrick Bertagna at GTX Corp (OTCBB:GTXO) its Founder/ Chairman and CEO. He had some interesting comments about how the company has evolved and found some traction with its wholly owned subsidiary LOCiMOBILE Inc. Bertagna commented "With 500 million smart phones entering the market place, I believe we are at the tip of the next disruptive wave. Apps will become as ubiquitous as the device they live on and that makes this new frontier a game changer" Certainly being on the iTunes top ten highest grossing list puts us at the forefront of this coming wave."

BEAM: Game Plays...

SatMagazine.com : November 2009 - With this issue's focus on the Latin American and MENA markets, one of the most interesting news items deals with Rio de Janeiro's win of the 2016 Winter Olympics. Companies

who bid for, and win, the broadcasting rights to the 2016 Summer Olympics in Rio de Janeiro are certain to enjoy substantial profits, and Latin American countries and communities are already celebrating this award by the Olympic Committee.

According to GTX Corp., a firm whose base is in the Personal Location Services businesses, Latin America has increased its adoption of Location Based Services by a factor of 10 from 2008 to 2009. Carlos Briceno, the firm's Vice President of Business Development, states that the category with the highest total spending in South and Central America is in "People Tracking," which has been the exact focal point of GTX Corp for the past seven years.

Kids Sneakers That Know Where They Are

Castro Valley Forum - CA, USA - By : Michael Singer : 10/16/07

There is a trend in high-tech that recommends adding location-based services to anything and everything. But it has me pulled between wanting to see really cool gadgets and avoiding a Big Brother-like society.

The latest is a new high-tech tennis shoe coming to the market that lets parents and guardians track the movements of their family using Global Positioning Systems or GPS technology.

Called the "Smart Shoe," the miniature device is inserted in the sole of the low-top sneaker. An antenna that runs up the back of the footwear communicates with satellites and relays a location back to a subscription Web site service for easy viewing. Los Angeles-based GTXC, which makes the devices and the service, said it is hoping to put Smart Shoes in stores by the end of the year. Shoes with the technology could cost between \$100 and \$200. The tracking service is expected to cost about \$20 a month.

Follow That Kid

Today's technology makes it easier for parents to know where their kids

are and what they're doing.

By Joe Burriss | Baltimore Sun | July 1, 2007

Michelle Smith had been reluctant to buy a cell phone for her 7-year-old daughter, Daysha. Then one day in April, a substitute teacher placed the Radford, Va., girl on the wrong school bus.

Instead of being dropped off at her older sister's after-school program as planned, Daysha was sent home - only to find the doors locked.

As she sat on her front porch crying, her mother drove around town, searching frantically for the girl. No one at the school could tell her which bus the girl had been put on.

"Then my next-door neighbor called," said Smith, "and said, 'I have your baby.' "

The scary moment had a happy ending, but Smith didn't want to take a chance on losing her daughter again. So she did what many other parents are doing - she bought her child a cell phone equipped with an electronic device that could keep track of her whereabouts.

Tracking technology hits the ground running.

Wherever you go, there you are. And we know where you are.

By Nancy Francis

GPS technology will soon be at your feet, offering peace of mind to loved ones of Alzheimer's sufferers, people with autism, active preschoolers and others who might wander into harm's way or get lost.

A Los Angeles-based company that sees opportunity in the merging of GPS tracking technology and footwear, has developed several prototypes of GPS tennis shoes.

GTX Corporation is having discussions with various footwear manufacturers (including some in Oregon) about licensing its technological designs and connectivity system.

During a recent visit to Portland, GTX Corp CEO Patrick Bertagna showed KGW a prototype of the company's GPS shoe.

Mobile Ways to Keep Track of Your Kids

By Lori Tucker, (WATE) Knoxville, TN -- June 7, 2007

As technology makes our society more mobile, there are more mobile ways to keep track of your loved ones including cell phones, car trackers and even shoes. GPS shoes That's right, an LA company has patented a GPS system in a shoe.

Xplorer Smart Shoes, made by GTX Corp., are able to track the person wearing them in real time or by remote surveillance.

GTX says the shoes work particularly well for: children, people with Alzheimer's disease, outdoor adventures, military, police, fire and public safety workers.

IN THE PIPELINE: Tracking All The Uses For Positioning Chips

By Donna Fuscaldo - DowJones Newswire - May 1, 2007

For Patrick Bertagna, the eureka moment came a few years ago when watching the coverage of the Elizabeth Smart abduction. After spending years helping companies track their products via software, Bertagna decided it was time to do something that mattered.

So the serial entrepreneur, armed with a couple of checks from friends, launched Global Trek Xploration Corp., a Los Angeles-based company that's developing shoes embedded with a global positioning chip. The shoes will enable parents to monitor their children's every movement and caregivers to keep real time tabs on elderly or sick people.

Top-Notch Security

M2M - Specialty Publications - April 6, 2007

M2M technology providers and system integrators often cite efficiency improvements and new revenue opportunities as common indicators of return-on-investment. However, as more and more customers use machine-to-machine applications to collect data, security has not only become a top-notch priority for end users and OEMs (original equipment manufacturers) but also a highly valued part of fostering a positive ROI.

According to IDC Corp., www.idc.com, Framingham, Mass., as devices enabling a mobile workforce continue to shrink in size, the increased likelihood of losing devices, such as laptops, mobile phones, BlackBerrys,

has caused growing concern over the sensitive corporate information they contain.

Smart Shoes Get Smarter

M2M - Specialty Publications - April 2, 2007

Smart shoes just got a little smarter. The newest models of GPS-enabled (global positioning system) shoes from Global Trek Xploration Corp. (GTXC), www.gtxcorp.com, Los Angeles, Calif., will now be equipped with wireless and location modules from Enfora Inc., www.enfora.com, Plano, Texas.

GTXC chose Enfora's Enabler IIG-A-GPS modules for its robust and accurate platform, company executive say. Eric Stalnaker vice president of business development at GTXC explains, "Enfora and the Enabler II provide us with an integrated approach to software, Internet connectivity, and customization that lets us focus on our product and service offering."

Wireless Briefs

by Andrew D. Smith | Dallas Morning News | Thursday, March 29, 2007

Few at conference get to soul of GPS shoe

Satellite tracking services were expected to be one of the big attractions at this year's big wireless conference in Orlando, but the satellite shoe seemed to surprise most of the people walking around the convention floor.

Many passers-by Wednesday furrowed their brows or shook their heads at what appeared to be a silly toy for spoiled yuppie joggers. Only a few investigated long enough to realize that the GPS shoe may well be one of the least frivolous prototypes on display among the 1,100 exhibitors. Developers plan to sell the device as a way to track mentally disabled people or seniors who have Alzheimer's disease.

Where would you be without GPS?

Perhaps carrying fewer gadgets: The technology is being added to shoes, MP3 players, dogs

By Carolyn Y. Johnson | Boston Globe | February 19, 2007

This month, GTX Corp. launched a line of Xplorer Smart GPS shoes that transform sneakers into a wearable LoJack system.

ABI Research found that the number of people in North America who subscribe to GPS-enabled location-based services more than doubled between 2005 and 2006, from 1.6 to 3.9 million. The number of subscribers is projected to rocket to 52 million in 2011.

That means companies working in what used to be a niche market have been enjoying explosive growth. Revenues at TomTom NV, a Concord-based maker of personal navigation products, have increased more than 500-fold since 2001, from \$2.5 million to an estimated \$1.7 billion last year. Garmin's business has exploded into the mainstream, too, and the company ran its first Super Bowl ad this year. Boston-based start-up Skyhook Wireless brings location awareness to any device with WiFi, and announced a major partnership this month with GPS platform maker SiRF.

Xplorer shoes offer advanced personal location services

from Wearable Electronics

January 29, 2007 - We've written several times about the concept of electronically fencing dogs and cats for their safety, or the safety of others. Similarly, as GPS technologies have become commercially viable, of tracking assets and loved ones to ensure their safety. Now personal location services company GTXC Corporation, is set to unveil a line of Xplorer Smart GPS shoes at the World Shoe Association (WSA) in Las Vegas on February 1 which offer a range of new opportunities. Xplorer shoes incorporate a small and robust GPS tracking device which hooks up with GTXC's internet user portal to offer a very compelling array of personal location services.

Integrated GPS Shoes by GTXC

Getoutdoors.com Outdoor Blog - Friday, February 2, 2007

Integrated GPS Shoes by GTXC Though originally made to track patients and kids, we're sure the shoes will be integrated soon with the Nike + Ipod so you can track your run in your personal Google mashup. Or hide it in your wife's purse to see whether she's banging San Francisco's mayor, Gavin Newsom. Or something like that. The system from GTXC has a sophisticated GPS integrated into the shoe, which communicates directly with a satellite, which then relays locations in real-time to their monitoring center and made available via internet or phone. Predetermined geographic areas can also be defined and alerts sent when

the person being tracked leaves or enters the area. And don't worry, they already have a product for outdoor activities called the Wearable Caddy.

New Smart GPS Shoes

Manisha Kanetkar - Thursday, 1 February 2007

Keeping track of your loved ones has never been so easy (or so spy-like) with the new Xplorer smart GPS shoes designed by GTXC.

The company boasts the shoes incorporate the smallest, most powerful and robust GPS tracking device currently available. GTXC says they are ideal for caretakers of children or the elderly to easily monitor the location of their charges.

So, for example, they can preset perimeters of safe zones or unsafe zones, and then receive mobile phone alerts if a perimeter is breached by the wearer. This is handled by what the company calls its 'set-it-and-forget-it' Dual GeoFencing feature.

Shoes with GPS locator Coolest Gadgets

Jan 29, 2007 - GTX Corporation will be unveiling its new line of Xplorer Smart GPS footwear at the beginning of next month in Las Vegas. The Xplorer aims to usher in the next generation of GPS smart shoes by incorporating smaller and yet more powerful GPS chipsets inside the shoe itself to provide a more accurate reading....

GTX Corporation unveils GPS-equipped Xplorer shoes Engadget

Jan 26, 2007 - It seems like Sayo Isaac Daniel has some serious competition coming at him in the GPS shoe market, as GTX Corporation is unveiling its latest geo-tracking footwear at next week's World Shoe Association trade show. The questionably styled Xplorer kicks pack an internal GPS transceiver,...

GPS Shoes keep track of kids

January 25, 2007 - GPS-integrated shoes - now why didn't I think of that? The Xplorer line of Smart GPS shoes from GTX Corp. come with an integrated GPS tracking device which helps parents keep tabs on their children. In addition, parents are able to set up a virtual boundary, where they will be duly noted via SMS should the shoes leave beyond the designated area.

GPS Shoes Let Mommy Know Where You Are

January 25, 2007 - Good news for worried parents. These GTX GPS Xplorer Smart Shoes will let you keep track of your kids no matter where you are. Here's how it works.

Define a "safe" area around your house or school that it's safe for your kids to wander around. When the GPS signal goes outside of the area, an SMS will be sent to your phone alerting you of the situation. Then you're free to call your wife, the police, or Chloe from 24.

The GTX GPS shoes have a small GPS tracking device inside the shoe actually communicates the location to a central location tracking service

ESATO NEWS - Jan 26, 2007 - Xplorer, the next generation of smart GPS shoes, incorporates the smallest, most powerful and robust GPS tracking device on the market today. Drawing on a long history of patented embedded GPS technology for footwear and other consumer products, GTXC has been in development on the Xplorer line for the past three years. The new line advances the state of GPS tracking technology considerably, utilizing several groundbreaking innovations currently in the patent process.

GTX Corp. announces the Xplorer line of Smart GPS shoes

Thu, 25 Jan 2007 - The GTX GPS shoes have a small GPS tracking device inside the shoe actually communicates the location to a central location tracking service. So you could get your kids these GPS sneakers and define an area where it is safe for the kid to wander around. When leaving the defined area an SMS would be sent to your mobile phone notifying you of the situation. GTX calls this feature GeoFencing. The batteries powering the GPS unit inside the shoes last several days.

"With Liberty and Surveillance for All: Person-to-person Surveillance Gets Green Light from Public

Survey research from Boston University graduate students shows that Americans are more willing to engage in surveillance of loved ones than one might expect given our love for independence. Half of Americans are comfortable with being electronically monitored by a loved one for safety or health reasons. Nearly a third 32% say it is likely they will use a tracking device to monitor a loved one in the future."

"The greatest endorsement of P2P surveillance is that 66% of Americans are comfortable being monitored by concerned loved ones in case of emergency. That's an awfully large market waiting to be tapped by

companies like GTX Corporation who debuts its first GPS-based tracking shoe for children this week."

Excerpts from recent Boston University Research indicating that two-thirds of Americans are comfortable being electronically monitored by loved ones in case of an emergency
