Jeffrey

Boeing in Palm beach now,

Aux Boost pumps operate normal in ground,

There 2 in fwd aux tank and 2 in rear aux tank,

In flight we can operate any one pump to transfer aux fuel, but when selecting both pumps on at same time, we get low psi light,

We are better than before, but still have work,. I'll speak with Neil at Banyan plus Morrison to continued trouble shooting,.

Stambaugh avionics assisted, so banyan should be able to work with quite wing to address our issue in depth

Thx

Larry
