 [This Week on Kickstarter](#)

SEPTEMBER 13, 2012

This week's projects will turn your digital pixels into frame-worthy prints, teach you to build robots from scratch, and show you just how (ahem) *illuminating* a simple poem can be.

 [Impossible Instant Lab: Turn iPhone Images into Real Photos](#)

[Impossible Instant Lab: Turn iPhone Images into Real Photos](#)

by The Impossible Project

 Category Product Design

 Location New York, NY

Instant retro

Fashioned in the snap-and-go style of vintage Polaroid cameras, the Impossible Instant Lab will transform your digital snaps into actual instant photographs. Just use their app to select an image, slip your phone into the device, and wait. When it's ready, your print will be ejected straight into the palm of your hand. Don't forget to say *cheese!*

Robert Montgomery: Echoes of Voices in the High Towers

by mono.kultur

 Category Art Book

 Location Berlin, Germany

Everything is illuminated

Robert Montgomery writes poems, but he's not exactly a published author. Instead, he transforms his work into large scale light installations or public billboards, where they can be enjoyed by any passerby. Until now, these profound musings on love, life, and the world at large have remained site specific, but with help from a small publishing collective they'll be compiled into a beautifully designed, multi-part print edition.

Multiplo: Create Your Own Robot

by Multiplo LLC

 Category Open Hardware

 Location Miami, FL

'Bot in a box

Multiplo is a simple kit containing everything you need in order to build your own robot: a set of interchangeable mechanical parts, an Arduino-compatible controller, and basic programming software. You can mix-and-match components to create custom functions, or simply follow along with instructions, but whichever 'bot you want to build, Multiplo will get you started right out of the box.
