The Enneagram and Centering Prayer: Tools to Uncover and Transform Shadow Qualities of the Unconscious

by [David Grinstead](#)

The Enneagram and Centering Prayer are explored as tools for transformation of the Shadow Archetype. An attempt is made to demonstrate that the Enneagram can be used to uncover shadow qualities of personal unconscious motivations and deeply rooted influences and prejudices of a dysfunctional nature. Through the consistent practice of Center Prayer (over an extended period of time) these dysfunctional qualities are brought into full consciousness and transformed into positive motivations, influences, attitudes, and behaviors. Existing literature, the author's personal journey, and...

Autism Spectrum Disorder and Memory

by [Seema Nath](#)

The present study attempts to understand the memory capabilities and quantity of recall in children with Autism Spectrum Disorder (ASD) when compared with typically developing children specifically in terms of episodic and semantic memory systems. The study employed a personal interview and a words list paradigm respectively to study the episodic memory and the semantic memory under free and cued recall conditions. In addition, the study examines the effect of the severity of ASD on memory. The results show that children with ASD perform worse than typically developing children in the...

Critical Periods of Cognitive Function and the Limits of Adult Neuroplasticity

by [Dhonam Pemba](#)

Part of the Neurofoundation book. This chapter will focus on developmental time windows for cognitive functions, i.e., critical periods during which the right stimuli can provide maximum return on developing cognitive function and its underlying neural circuitry. A comparison between child and adult neuroplasticity will be addressed.

Adolescents' Perceptions of Helmet-Wearing Peers

by [Caroline McNicholas](#)

Bicycling is a common form of recreation for adolescents. Despite injury risk, adolescent helmet use rates are very low (e.g. 5%-20%). The purpose of this study was to examine adolescent attitudes toward helmet use among hypothetical peers. Participants were 40 adolescent boys aged 10-14; 60% of participants reported "never" or "rarely" wearing a helmet. Youth were presented with a series of three photographs of same-age, same-sex peers riding bicycles with or without helmets. Attitudes towards the hypothetical peers were measured using the Photograph Reaction Questionnaire (PRQ) and the...
