hi jeffrey I am trying to figure out what is happening in the world and where we are I think the buy of motorola patents and kodak licensing and autonomys special alogorhythms tells me we are on the cusp of a new world but we are changing gears and are not there yet.We are taking the next leap in interoperability where devices do more of the work ie i robot and ford linkysys.unfortunately our workforce is not trained for this work and the end products are not ready yet so high unemployment and slow growth for 5 years till our washing machines tell us we are wearing out our clothes ,what do you think of this theory.jf
