Jeffrey:

We've begun preproduction planning. I'd appreciate names of those with whom you've worked and/or funded, or whom you recommend - in general, but specifically on the following topics:

1. Mathematical Breakthroughs 1: Mathematics and Truth
(e.g., strangeness of probabilities, signals and codes - but broadly)
2. Mathematical Breakthroughs 2: Power Laws
(found everywhere in nature, Pareto, law of large numbers)
3. Mathematical Breakthroughs 3: Mathematical Biology
(e.g., membrane computing; neural networks)
....
7. Biological Breakthroughs 7: Plants and their Worlds
....
9. Biological Breakthroughs 9: Deception
.....
11. Brain/Mind Breakthroughs 11: Music and Cognition/Emotion
.....
13. Brain/Mind Breakthroughs 13: Dreams and Cognition/Emotion
(e.g., dreams 'always on' - I know the key names for dreams but wonder if you have people in particular)

The other topics I pretty much know the intellectual leaders. Nonetheless, in addition, please advise *anyone* you recommend. Also, please advise those whom you want me to mention your name.

We are excited and looking forward,

Robert

A delight, as always - multiple fronts.

Pleased to be your partner: "Radical Breakthroughs" can be important; I take the responsibility - creative/content and business/financial - very seriously. I'll get back to you after the Physics of Fine-Tuning shoot (when in China)

When next we meet (late July), let's discuss/explore our business sides, perhaps some synergies.

Here's yesterday on Fox Business. The topic was supposed to be China's economy, but got sidetracked into North Korea by release of US hostage.
