I have not been able to confirm the new route. It was too rough to dive week before last and last week we had to do ambient in St. Croix. I will not be available to check it until end of this next week, and will do so and then we can get back on track. It just happened that this fell in the mist of bad weather and things I could not schedule around.

Good afternoon Mr. Kahn,

Per Mr. Epstein's request, Amy is working on a new landing for the cable. As soon as it is verified I will take a trip with her to map it out on the drawing.

I must stress to you that the critical path remains the selection of the cable and giving Bryan Electric the notice to proceed on procuring the switchgear.

Again, i strongly recommend the armored cable of Kerite. It is a better cable and I believe it will save you money in the long run. In discussing with Amy, there will also be some additional cost with the landing if Pirelli is selected because it is not armored in the same manner as the Kerite cable.

Best,

HH

Hugo,

Clinton and Amy will be going to GSJ on Saturday to view the landing sites and then finalize any requirements. Clinton is supposed to communicate the information to you, and Amy will also communicate her suggested articulated pipe lengths, and then from that information i understand you will prepare the drawings specified in Amy's email below. Can you please give us a specific timeframe for completion as Amy cannot complete her application package without it and that we are trying to have Amy's application package completed by the end of the Second Week in February.

Thank you

I am expecting the following information:

Detailed Cable specifications/Drawing  
Site plan/cross sections for landings  
Details for landing structures , ie manholes, switching equipment  
Drawings for equipment  
Upland routes to switching equipment

I will be suggesting articulate pipe lengths based on landing configurations.
