That's the issue, I saw the path so I know its accessible and the slope down the beach isn't bad. Something like this might work.

Could you live with a dock at the location in the attached picture. We can make this work there is one large ESA listed coral but we can work and avoid it. There are other corals but we can work with those. The area has rock and it will impact construction methods but there is plenty of water depth and plenty of room to work with. I saw there is a new road (path) cut to this area so I know its accessible.
