Jeffery,

Toshiba will have some numbers for us shortly. They would like to do a site visit the week of Jan 7-11. See below. I have attached the email with the information I sent them.

Can I set up a time for them to visit the Island during this week?

Jeanne

Jeanne,

Thank you for the information. We are studying it now and should have some numbers shortly.

I am planning a trip to St. Croix for another project the week of January 7-11. I wonder if we might be able to see the facilities and survey potential land for the solar array that week?

Thanks,

Jeff

Jeff,

Please see attached; WAPA bills, schematic of the electrical system and the generator specs. I will follow with additional requests.

EFTA00701287

Any additional information or questions let me know.

Best,  
Jeanne

Jeanne,

An excel history will be fine for now, but can you at least send us the latest copy of a bill so that we can see if there are any time-of-use and/or demand charges. That type of data helps in our equipment sizing calculations.

Thanks again,

Jeff

Jeff,

Thanks for the follow up. We will compile the necessary information requests.

Do you prefer a copy of the electricity bills or an excel history of readings and usage?

Happy Thanksgiving to all.

Jeanne

Jeanne,

Thank you for your time this afternoon and please forward this message to anyone on your team that should have a copy.

TIC will perform a preliminary feasibility study of solar energy production on LSJ Island. We are familiar with the challenges of designing and building solar in the Caribbean and have developed cost effective solutions to meet these challenges.

Our initial thoughts are that a solar PV plant sized to meet the entire needs of the island would most likely be the best solution. This will require that we know as much about the electricity consumption and generation capabilities as possible. Please, provide us with 12-24 months of VIWAPA electricity bills and if possible any interval or time-of-use data on consumption. This data may be available from strip charts or data logging of the generators when they were running.

We would also like to have the name plate data on the generators and a single line diagram of the electrical system.

Also, please indicate on a map where we can locate the solar array and battery station.

Thank you and have a Happy Thanksgiving,  
Jeff
