 Good Health Starts with Knowing

July 2017

 Are you at risk for hepatitis C? Most of us don't know.

KNOW your risk for hepatitis C

Three million baby boomers have hepatitis C. Most of them don't know it.

Hepatitis C is a contagious liver disease that can turn into a serious, lifelong illness. But if caught in time, Hep C can be curable.

If you were born between 1945 and 1965, you should get tested. Knowing can help you make important decisions about your health.

 heart

People with hepatitis C often don't feel sick for decades.

Many don't know they could spread it to their loved ones. The good news, though, is that early treatment can stop or slow Hep C's effects.

Are you at risk?

Boomers have the highest risk, but anyone can get Hep C. Learn more about your risk. Take the following quiz, print the report, and discuss it with your doctor to see if you should consider Hep C testing.

Request the test

Ask your doctor about the Hepatitis C test. Once you have the lab order, you can schedule your appointment at one of our more than 2,200 patient Service Centers.
