---

attached are photo's from yesterdays accident.

Engineering is still looking into cost of damage and parts to repair

the main computer, some minor frame damage, fenders, hub and trash bin at this time

A breakdown of parts and cost will forward next week.

Bosco has taken the today off and will file a accident report next week

Tom and I believe that this accident was due to operator error.

It seems that Bosco's load was to the front of the Bin and when he went to unload his right rear wheels where uneven to the ground.

The load shifted to the down hill side causing the truck to tip over
