---

There is something to it  
It is always a distribution peaked somewhere  
High energy physics is still the most fundamental science of all  
Theory and experiment have to go hand in hand  
The energy will be too high to build collider after fifty years  
This coming years will be the last chance to see the most fundamental law of nature  
I believe much of the ideas ,which include a great deal of math ,will be the major tools to understand theoretical biology  
One needs leaders of many different subjects to pioneer the subject of theoretical biology  
Math and Probability will be a fundamental tool  
I think one needs at least 12 outstanding leaders in math, physics and applied science together who are willing to interact with biologists in harvard , MIT and other places  
Then go to explore the foundation of biology in depth  
And have a large group of outstanding biologists to come  
Right now , most biologists will only care of what they are doing now

thank you , I ve started reading your book, query, is super symmetry , merely the core expression of a normal probability distribution. If we assume that we have a random , independent distribution. matter , info , energy, and think of the Central limit Theorem. that distribution is symmetric and could appear as a pseudo force with nothing more than an attractor.

Dear Jeffrey

It was nice to meet you again.

I just asked my secretary to send you a copy of my book ( with Steve Nadis)  
which is just printed

I assume that you are not interested to fund the acupuncture project.

Concerning the idea of funding a great institute for creative thinking in basic science , I certainly think it

is worthwhile to pursue  
I have many ideas that need to discuss with you more thoroughly  
Are you leaving today?  
Best regards  
Yau
