---

Just boarding flight to Seattle

Sorry I will miss you

Have fun with Stevie

He's still fragile but a little less negative (fingers crossed)

Hope mtgs w Bill productive

Had another vagus thought about infectivity. It innervates the throat both motor and sensory. I believe every single sore throat means vagus is compromised. That's why influenza makes you achy since it enters nervous system there. That's also I think where you get some diarrhea as enteric route as well. Need to immunize the vagus nerve.
